## Beznau NPP: unit 2 back on grid

**The technical failure in the non-nuclear part of the plant has been rectified. Block 2 of the Beznau nuclear power plant was reconnected to the grid late Monday evening.**

The repairs for the restart of Block 2 have been completed. Electrical components in the non-nuclear part of the plant were affected. Once the failure had been rectified, Block 2 was reconnected to the grid. The supervisory authority ENSI had given its approval for the restart in advance.

The reactor in Unit 2 was automatically shut down in the night from Sunday to Monday. This was triggered by a failed connection to the 220 kV grid. The plant reacted as intended in such cases and was in a safe state at all times.

### About Axpo

Axpo is driven by a single purpose: to enable a sustainable future through innovative energy solutions. Axpo is Switzerland's largest producer of electricity and an international leader in energy trading and the marketing of solar and wind power. Axpo combines the experience and expertise of more than 7,000 employees who are driven by a passion for innovation, collaboration and impactful change. Using cutting-edge technologies, Axpo innovates to meet the evolving needs of its customers in over 30 countries across Europe, North America and Asia.
