## Axpo purchase of CCGT plant in Poland approved

Axpo Polska has received approval from the President of the Polish Office of Competition and Consumer Protection (UOKiK) to acquire 100 per cent of the shares in Polenergia Elektrociepłownia Nowa Sarzyna sp. z o.o. The final purchase agreement was signed by both companies today.

The 116 MW combined cycle gas turbine (CCGT) plant in Nowa Sarzyna, southeastern Poland adds a flexible generation source to Axpo Polska's portfolio while supporting the integration of renewables and security of supply in the country's rapidly evolving power system.

The facility will be integrated into Axpo Polska over the coming months, maintaining operational continuity and retaining all current employees. Consistent with Axpo's strategy to develop and own strategic energy assets across Europe, the acquisition strengthens the resilience of Poland's national power sector and supports its energy transition to a lower-emission and more diversified energy mix.

Details of the preliminary agreement in December 2025 can be found [here](#).

### About Axpo

Axpo is driven by a single purpose – to enable a sustainable future through innovative energy solutions. Axpo is Switzerland's largest energy producer and an international leader in energy trading and the marketing of solar and wind power. Axpo combines the experience and expertise of about 7,500 employees who are driven by a passion for innovation, collaboration and impactful change. Using cutting-edge technologies, Axpo innovates to meet the evolving needs of its customers in over 30 countries across Europe, North America and Asia.

## About Polenergia

Polenergia, Poland's largest private energy group, consists of vertically integrated companies operating in the field of energy generation from renewable and low-emission sources, as well as energy distribution and trading. Polenergia is the first Polish company to subordinate its development vision to building a zero-carbon economy. The Group is engaged in the development of offshore and onshore wind farms and solar farms. The Group's strategic ongoing project is the construction of three wind farms in the Baltic Sea with a total capacity of up to 3,000 MW (together with Equinor).
